

Website Section Breakdown — North Country Cyber Safe

What each part of the site is doing and why (use this as a template for future sites)

The general pattern for any personal/professional site: **Hook → Who it's for → What you offer → Proof/depth → Trust-building → Call to action**. Below is how that pattern plays out on this specific site, section by section.

1. Hero (top of page)

What it says: "Simple, honest help so scammers don't win." Plus a one-line explanation of who it's for and where you operate.

Job it's doing: This is your 5-second first impression. A visitor decides in seconds whether to keep reading or leave. The hero has to answer "what is this and is it for me?" instantly — no jargon, no clever wordplay that makes people think too hard.

Template rule: Headline = the outcome you deliver, in plain language. Subheadline = who it's for + what makes you credible enough to trust in one sentence.

2. Who I Help

What it says: Three cards — Seniors & Families, Community Groups, Small Offices.

Job it's doing: Visitors self-identify almost immediately. Someone lands on the page and thinks "oh, that's me" within the first scroll. This also quietly filters out people who aren't your audience, which is fine — it makes the people who ARE your audience feel like the site was built specifically for them.

Template rule: 3 audience segments, one short sentence each. Don't explain your services here yet — just say who you serve.

3. What I Do

What it says: Three service cards — Scam-awareness talks (featured), Computer protection setup, Plain-English security help.

Job it's doing: Now that they know it's for them, they need to know specifically what you offer. The "featured" card (scam talks) signals your primary offering — the thing you want to be known for and get booked for most.

Template rule: Lead with your flagship offering, visually distinguished (border, badge, etc.). Keep descriptions to one sentence each — this section is a menu, not an essay.

4. Talks & Workshops

What it says: A list of specific named talks with their audience and availability status.

Job it's doing: This turns an abstract idea ("I do talks") into something concrete and bookable ("Spot the Scam Before It Strikes — for seniors, available now"). Named talks feel more real and professional than a vague "public speaking" offer — it shows you've actually built curriculum, not just an idea.

Template rule: Give each talk/offering an actual title, not just a topic area. A named product feels finished; a topic area feels like a work in progress.

5. Fraud Watch (content/credibility section)

What it says: Links out to your Substack, plus a free cheat-sheet signup.

Job it's doing: This is where you prove you're actively doing the work, not just claiming expertise. Ongoing content (blog posts, alerts) shows you're paying attention to what's happening right now, not coasting on a credential from the past. The free cheat sheet also captures an email address, which starts building your own audience you don't have to rely on social media algorithms to reach.

Template rule: Every credibility-focused professional site needs one "proof of ongoing work" section — this is different from your bio, because it's forward-looking (what you're actively doing) rather than backward-looking (what you've already achieved).

6. About

What it says: Your honest story — recent grad, CEH, certs in progress, why you started this. Paired with a "pledge" card listing your values (no jargon, no fear tactics, free for individuals).

Job it's doing: This is where trust actually gets built. Notice it's NOT the first thing on the page — people don't care who you are until they already know what you offer and believe it might help them. The "pledge" card format turns vague trustworthiness into specific, checkable promises, which is much more convincing than just saying "I'm trustworthy."

Template rule: Be honest about where you are in your career — early-career honesty (like yours) actually builds more trust than exaggerated authority, especially with your intended audience. A pledge/values list is a strong device for any trust-dependent site (health, finance, legal, security).

7. Contact

What it says: A simple form (name, email, message) plus a direct email link as backup.

Job it's doing: This is the actual conversion point — everything above this section exists to get someone here. Keep friction minimal: three fields, nothing more. A backup direct-email link matters because some people just don't trust forms and want to see a real address.

Template rule: Fewer form fields = more people actually submit it. Always give a non-form backup contact method.

The overall shape (for your brother's site)

This same skeleton works for almost any personal-authority site — a doctor, a consultant, a speaker:

1. **Hero** — the outcome you help people achieve, one sentence
2. **Who it's for** — 2-4 audience segments people can self-identify with
3. **What you offer** — services/products, flagship one highlighted
4. **Specific offerings** — named talks, named services, named packages (not vague categories)
5. **Proof of ongoing work** — blog, publications, recent talks, media mentions
6. **About/trust** — honest bio + a values or "pledge" section
7. **Contact** — minimal-friction form + backup contact method

For your brother specifically, since he's building toward writing/speaking to medical and tech companies, the sections would likely shift slightly:

- "Who I Help" becomes more about the audiences he speaks to (healthcare orgs, tech companies, patients)
- "What I Do" becomes speaking topics + writing/books
- "Fraud Watch" equivalent becomes his Substack/published articles feed plus maybe a "recent talks" list
- About section carries more weight for him, since his decades of medical practice IS the credibility — that section might actually be longer/more prominent on his site than it is on yours

Happy to help sketch his actual page structure whenever you're ready to start his.
